Re: Lease Name: North Burbank Unit Tract 14  
Well No.: W24  
Location: SE/4 Sec 10-T27N-R05E  
Osage County, Oklahoma

Dear ENR Personnel:

Please find Chaparral Energy, L.L.C.'s CO<sub>2</sub> Permit Application for the referenced well. This well is currently a "By-Rule" water injection well and that will not change. However, in discussion with EPA personnel in Dallas, it was found necessary to permit this well for the CO<sub>2</sub> injection also. This way the well can be used to inject both types of fluid. Notice we said fluid because at the temperature and pressure we are proposing the CO<sub>2</sub> which is normally thought of as a gas will be in its liquid state. *Yes it will.*

Chaparral is undertaking a large project to bring all the wells in the area of this well up to standards which will contain the CO<sub>2</sub> within the Burbank Injection Zone. We are also enclosing Form 139's which have been filed with the Bureau of Indian Affairs Osage Agency to workover surrounding producing and shut-in producer wells. This should show you and the EPA that Chaparral is serious about containing CO<sub>2</sub> within the Burbank. Since CO<sub>2</sub> is a commodity which Chaparral will purchase and transport to the Unit for use, Chaparral does not want to lose it to other zones or the atmosphere.

We have explained to EPA permitting personnel in the Regional Office that there is a pressure factor involved with this injection which must be met to obtain adequate reservoir pressure to obtain miscible flooding. That pressure is believed to be near 1060 psig for the Burbank at our proposed injection temperature. This will help create the most efficient WAG (water and gas) Flood. *is the surface or down hole?*
